

**WATER GEMS**  
 Water droplets inspired the creation of this borosilicate glass ring which naturally sparkles at every move. Crafted by capturing purified water in the glass sphere, permanently sealed with a special technique, attention to detail allows the creation of a fine water gem jewel. While touched by sunlight, the natural reflections will sparkle as beautifully as those of a shimmering diamond and when light shines through the ring at an angle of 42°, a gorgeous rainbow appears.

**LAJEWEL**

*Designer* Sasivimol Chaidaron developed her award-winning graduation project and launched the brand Lajewel with the aim to create a new definition of luxury jewelry. Natural elegance is the brand's philosophy and each of the pieces is created by capturing the essence of droplets in nature through an inventive and innovative process where glass is used as the body of the jewel, delicately crafted and assembled with precious metal by local craftsmen in Thailand.
